

Active Minds...

*imagination, infinite possibilities,
new friends and a love for learning*

Two Year Olds

Our 2 year olds are enthusiastic, vibrant, balls of energy. They like to climb, explore and use language skills. Their language is expanding rapidly. To keep these “balls of energy” learning we have a fast paced active curriculum. To build a sense of trust, activities are consistent and no skill lasts more than 15 minutes at a time. Work is in small groups and individual. This is truly the “ME” stage with socialization with others and sharing a milestone to come. Children will work on Language Arts, Science, Creative Dramatics/Movement, Social Studies, Art, Music, Math and Thinking and Gross motor Skills. Yoga, sign language and Spanish will enhance the curriculum.

Language Arts

Language art activities will follow a language experience approach. The children’s receptive and expressive language is enhanced through the use of finger plays, rhymes, and poetry, discussions and experience charts.

Science

Science activities are aimed at encouraging observation, comparison, exploration, testing and problem solving. At this level it will be exploration and observation. Activities will be completed in small groups then placed at stations for children to experiment on their own (as allowed).

Social Studies

Social Studies will focus on learning about self, home, transportation and the people around us in Atlanta. Community people will be invited into the classroom. Parents will be invited to share special cultural treats.

Art

Art is a creative process that allows choice, exploration and imaginative expression in a pleasant, supportive atmosphere. Painting, play dough, scribble art, and object printing etc will explore the colors and shapes. We will also be discovering in Math. Working with scissors will begin.

Music

The goals of music are to develop appreciation, participation and responsiveness. Listening, performance, movement and creativity will be promoted. Special performances will be at Christmas, Thanksgiving, Parents Day, and Spring Tea!

Math

Math activities will reflect the needs of the pre-operational child age 2. Opportunities will be presented through: sorting, matching, finger plays, comparing.

Thinking and Gross Motor Games

Thinking games motivate little ones to develop cognitive skills within a play situation. Children, through thinking games, learn to identify, classify and apply skills. Gross motor skills contribute to positive physical and mental health. This is a key growth area for our 2’s.

Of course naptime is essential and potty training may begin. What a busy day—what fun!!
